

CONTRIBUTORSHIP

Data Cleaning:

The data cleaning task was broken down such that each one of us had to work on different parts of the data. Neeraj worked on the date column to split the date into 'Day' and 'Date'. Mary created R scripts to separate the earthquake location column into different columns namely distance, direction and volcano names. Namrata worked on replacing the junk characters in the volcano names to the original Icelandic names.

Draft R Script:

Mary worked on the R scripts to run different tests to find any meaningful and significant results related to our research question.

Draft R plot:

Namrata and Neeraj worked on the R scripts to develop different plots to visualize our findings.

Presentation:

Various aspects of the presentation was split among the 3 of us equally.

Written Summary:

Namrata and Mary
